

# Patient Health Report

## Patient Information:

Name: Alex Tom

## Medical Test Results:

- Neurological Assessment: Severe Parkinsonian symptoms with significant motor decline.
- Mobility Test: Unable to walk unassisted, high risk of falls.
- Cognitive Function Test: Moderate cognitive impairment detected, requiring close supervision.
- Blood Pressure: 140/90 mmHg (High)
- Blood Sugar Levels: Fasting: 120 mg/dL, Postprandial: 180 mg/dL
- Heart Rate: 85 bpm (Slightly Elevated)
- Oxygen Saturation (SpO2): 94% (Slightly Low)

## Prescribed Medications:

- Levodopa/Carbidopa: Increased dosage for worsening motor symptoms.
- Dopamine Agonists: Adjusted as per neurologist's latest prescription.
- Blood Pressure Medication: Strengthened dose for better control.
- Vitamin B12 & Folate Supplements: To support nerve health.
- Daily Physical Therapy Exercises: Essential to maintain mobility.

## Doctor's Remarks:

- Patient's condition has progressed, requiring increased assistance.
- Higher risk of falls - recommend constant supervision.
- Stronger medication regimen prescribed; regular monitoring needed.
- Follow-up appointments scheduled every two months.
